Case

Stars

Given a file named ***testdata.in***, print all the stars in ascending order based on the number of stars for each line.

Format Input

The input contains N line of stars to be sorted.

Format Output

Print the stars in ascending order based on the number of stars for each line.

Constraints

The number of N lines inside the *testdata.in* is not specified. However, it is guaranteed that the data will not exceed the given memory limit.
